

Platform development and maintenance

Report of the evaluation and graphical user interface of the platform

D6.3

By Alexander Gesinn
WP6 Leader- EnTIRE Consortium
gesinn.it GmbH & Co. KG, Germany

D6.3 Report of the evaluation and graphical user interface of the platform

Project:	Mapping Normative Frameworks of EThics and Integrity of REsearch
Project acronym:	EnTIRE
Start date of the project:	01.05.2017
Duration	48 months
Project number:	741782
Deliverable leader:	Alexander Gesinn
Deliverable number:	D 6.3
Dissemination level:	PU
Submission date:	11-09-2020

History

Version	Date	Description	Revised by
1.0.0	2020-06-30	First draft	Marc van Hoof
1.0.0	2020-09-09	Second draft	Marc van Hoof, Natalie Evans

List of contributors

- Alexander GESINN
- Sebastian SCHMID
- Natalie Evans
- Marc van Hoof

This project has received funding from the European Union's Horizon 2020 research programme under grant agreement N 741782.

Background

About EnTIRE

The areas of Research Ethics and Research Integrity (RE+RI) are rapidly evolving. In the EU and internationally, new legislation, codes of conduct and good practices are constantly being developed. New technologies, complex statistical methods, pressure to publish and obtain grants, and growing emphasis on stakeholder driven science increase the complexity of conducting science. In this complex and dynamic environment, it is not easy to identify the correct rules and best tools for responsible conduct of research.

The EnTIRE project aims to create an online platform (The Embassy of Good Science) that makes RE+RI information easily accessible to the research community. The platform will foster uptake of ethical standards and responsible conduct of research, and ultimately support research excellence and strengthen society's confidence in research and its findings. Our vision is to create a dynamic online Wiki-platform, owned by the RE+RI community, that will make the normative framework governing RE+RI accessible. The platform will adopt open source and open data approaches. By applying novel techniques for data collection, presentation, and comparison, users will navigate quickly and intuitively to appropriate content.

The Wiki approach for the platform software

The Wikimedia Foundation, Inc. (WMF) is a non-profit organization founded in 2003 by Jimmy Wales. It hosts sites such as Wikipedia. Wikipedia is an international online project which attempts to create free encyclopedias in multiple languages. The operation of Wikimedia depends on MediaWiki, a free and open-source wiki software platform.

Semantic MediaWiki (SMW) is a free, open-source extension to MediaWiki. Semantic MediaWiki can turn a wiki into a powerful and flexible knowledge management system. All data created within SMW can easily be published via the Semantic Web, allowing other systems to use this data seamlessly¹. Adapting the Semantic MediaWiki platform using expertise of the stakeholders will result in a dynamic platform which will contain numerous resources for the RE+RI community. The ability of linking related articles together will allow the novice to quickly find key information with minimal effort – including information which he might not have been aware of to be of relevance in the first place.

About Work Package 6 “Platform development and maintenance”

Work package 6 is responsible for meeting overall objective 3: to develop a user-friendly platform, including a website and online resources, to facilitate access to RE+RI knowledge and experience and support application in research and evaluation, thus fostering uptake of ethical standards and responsible conduct of research.

This work package is responsible for meeting overall objective 3: to develop a user-friendly platform, including a website and online resources, to facilitate access to RE+RI knowledge and experience and support application in research and evaluation, thus fostering uptake of ethical standards and responsible conduct of research.

WP sub-objectives include to:

1. Develop and employ the platform.
2. Evaluate and adapt the platform together with stakeholders.
3. Develop the tools for performing data mining and semantic analysis on the full information content.

List of Deliverables

	Title	Due date	Delivery date
D6.1	EnTIRE platform <i>The creation of the software stack for the back-end of the platform.</i>	M12	2018-04-30
D6.2	Publication of the adapted platform software in a public open source software repository <i>The publication of the software stack for the back-end of the platform. The software stack is available via https://github.com/the-embassy-of-good-science.</i>	M12	2018-04-30
D6.3	Report of the evaluation and graphical user interface of the platform <i>Report of the evaluation and graphical user interface of the platform making use of an evaluation of all WPs.</i>	M23	2020-09-30
D6.4	Publication of the extensions to the platform in a public open source software repository <i>Publication of the extensions to the platform in a public open source software repository.</i>	M40	2020-09-30
D6.5	Report of the efficiency evaluation of the platform <i>Report of the efficiency evaluation of the platform.</i>	M42	

List of Tasks

Title	Timeline	
T6.1 Development of the platform	M1	M12
<ol style="list-style-type: none"> 1. Initiate a non-profit organisation and register the applicable domain name (<i>OpenEthics.eu</i>) in its name. 2. Host and deploy the adapted Wiki-platform once the project starts. 3. Provide documentation of the hosting, deployment and software development to ensure transferability. 4. Develop a custom graphical user interface aimed at maximizing ease of use. 5. Adapt the platform to allow for online focus groups on the platform. 		
T6.2 Content structure and organisation of the platform	M12	M48
<ol style="list-style-type: none"> 6. Support the consultation of stakeholders in achieving the appropriate information content structure (e.g. database and data models) for the website. 7. Design the platform structure in line with the normative framework developed as developed in WP 2. 8. Make the platform the primary place to create, edit and review the content on the platform. 9. Establish a system where different types of users gain appropriate types of permissions (to create, to edit, to review and to curate information content) on the platform. 10. EUREC will find assist in finding a way for the ENTIRE platform to be technologically linked with the ENERI platform 		
T6.3 Publish open source software modification on online repositories	M12	M48
<ol style="list-style-type: none"> 11. Publish and make freely available all adaptations and developments made to the platform freely available, in an open source repository, for future (e.g. EU funded) projects to benefit from. Push back all relevant modifications to the platform to (Semantic) MediaWiki. 		
T6.4 Platform adaptation to the feedback	M30	M36
<ol style="list-style-type: none"> 12. Adapt the custom graphical user interface to maximize ease of use based upon the evaluation from stakeholders. 		
T6.5 Develop and employ a tool to search in and compare relevant topics across countries on the platform	M30	M48
<ol style="list-style-type: none"> 13. Develop an extension to the platform to search through all content available on the platform. 14. Develop an extension to the platform to perform data mining and/or semantic analysis on the content of the platform. 15. Develop a 'bird's-eye view' styled dashboard where relevant RE+RI topics can be compared across Europe and where content can easily be extracted by users live on the platform. This ensures open access to data. 		

Evaluation Process

Approach

The review was conducted following the principles of agile software development and Scrum². Agile software development ensures that development projects are simple, unbureaucratic and iterative. Agile methods and processes like the Scrum framework save time and costs.

The Scrum framework enables teams to self-organize by encouraging physical co-location or close online collaboration of all team members, as well as regular face-to-face communication among all team members and disciplines involved.

In the meantime Scrum is also used for other processes outside of pure software development³. Due to the previous experiences of the involved Work Packages with Scrum, this approach also fits seamlessly for the Evaluation.

The basis of Scrum is a product vision of the stakeholders, all further activities are based on this vision. Based on the product vision, the product owner (Marc van Hoof) works closely with the stakeholders to find out what the desired product could look like and what the most valuable features are for the stakeholders. The Product Owner describes the functionalities to be developed in the Product Backlog. This is a clearly prioritized worklist for the development team and is consistently processed by them in the specified order.

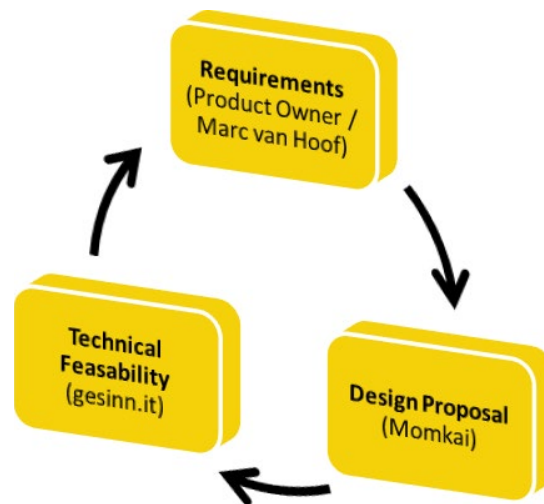

Figure 1: Evaluation through iterative approach

² [https://en.wikipedia.org/wiki/Scrum_\(software_development\)](https://en.wikipedia.org/wiki/Scrum_(software_development))

³ <https://www.agilealliance.org/resources/experience-reports/lessons-learned-using-scrum-in-non-technical-teams/>

At the beginning of a sprint, the sprint planning takes place. The product owner presents the prioritized product backlog to the development team. The development team decides independently how many of the highest prioritized requirements it can implement in the upcoming sprint, transfers them to the sprint backlog and plans the activities in the sprint.

	What	When
Sprint 1	Development of the back-end	April 2018
Sprint 2	Design of the user interface	May 2019
Sprint 3	Development of wiki functionalities in the user interface	Oktober 2019
Sprint 4	Implementation of easy navigation and ORCID login	February 2020
Sprint 5	Adding smart filtering & advanced sorting functionalities	June 2020
Sprint 6	Improving and enabling the platform for community use	September 2020

Table 1. An overview of the development sprint during the project lifetime

The Sprint Backlog provides a largely stable workload for the length of the sprint, while the Product Backlog catches the dynamics of the environment and thus keeps them temporarily away from the development team. The Product Backlog can be changed at any time by the Product Owner.

Technically, the product backlog was organized with the software Jira⁴. Jira provides the Product Owner, the development teams and other interested parties to track all issues (tasks) within the Backlog as well as organizing the issues in sprints.

The screenshot displays the Jira project board for 'SMW - June 2020'. At the top, it shows the project name and navigation options. The main board is organized into columns representing different stages of the development process: TO DO, SET REQUIREMENTS, IN PROGRESS, REVIEW, and DONE. Issues are shown as cards with titles, labels, and progress indicators. The 'Archive' section below shows a grid of issues with detailed descriptions and progress bars.

Figure 2: An example of the management of the development progress. In the top image, it is shown how tasks are handled in the Jira Software – by setting their requirements and by reviewing their result.

AllTrials campaign

What is this about

"All trials registered, all results reported." The AllTrials campaign is aiming towards publication of all of the results, from all clinical trials, on all treatments used^[1]. Their goal is to make this a reality for present, but also for past and future clinical trials. They launched in 2013, as an initiative of Ben Goldacre, BMJ, Centre for Evidence-based Medicine, Cochrane Collaboration, James Lind Initiative, PLOS and Sense about Science.

Why is this important

In evidence-based medicine (EBM), results from all of the studies on a particular treatment are collected and combined to make a single and robust conclusion that will impact clinical practice. To do this, researchers can only use evidence that is available to them. Research has shown that half of clinical trials end up never being published, and even more so if they have negative results about a treatment. This means that evidence informing EBM usually is distorted in favour of different treatments, which may not have the same effect in a real population, and some serious adverse events become discovered too late to prevent their impact. That is why it is important that all of the results are published, and not necessarily in journals.

D6.3 Report of the evaluation and graphical user interface of the platform

Phase 2) Evaluation by individuals associated to EnTIRE

Reviewers

A total of 10 reviewers have been invited to provide reviews on the platform user friendliness. These reviewers are not paid members of the EnTIRE project, but are associated to the project. For example, they serve in the advisory board. Their names and source documents can be gained by consulting the author of this document.

Summary of the qualitative review

Before the new version of the platform goes live in Q3 of 2020, the review was aimed at finding points for improvement in the latest development sprint (Sprint 6, see Table 1). Three reviewers have provided a rating from 1-5 on the user friendliness of the platform, their scores were: 3.5, 4, 4. The comments are summarised in Table 2.

Review implications

The feedback from the reviewers will be taken into account and existing features will be optimised and missing features developed during quarter 3 of 2020.

Phase 3) External evaluation

Future reviews

After this internal review an external review by the community of users will be implemented and embedded on the platform (embassy.science/evaluate) for future developments.

Aspects	Positive	Negative
General	<ul style="list-style-type: none"> The design is modern and clear Professional The look and feel of the platform is excellent Nice site, beautiful, clear 	<ul style="list-style-type: none"> The default setting for the font in the text is too small Twitter account is not visible Video can be improved with keywords Do not only rely on ORCID for logging in
Navigation	<ul style="list-style-type: none"> Main navigation is easy Information can be easily found Straightforward 	<ul style="list-style-type: none"> Two of the major menus (“Themes” and “Instructions”) aren’t good choices of words. Suggestion to use ‘Topics’ and ‘Training’. Training on deeper levels is inconsistent and cluttered. Searching a specific case or guideline is difficult and exhausting. Additional smart search tools are needed
Homepage	<ul style="list-style-type: none"> Front page should give more of a clue of content 	<ul style="list-style-type: none"> Requirement to scroll down to view all parts
Themes		<ul style="list-style-type: none"> Distinction between categories is dependent on context of the audience
Resources		<ul style="list-style-type: none"> No indication of what is contained in the specific resource – apart from the title A function added to ‘remove all filters’ so that you don’t have to remove these one by one?
Discussions		<ul style="list-style-type: none"> Unclear what is anonymous and what is not
Instructions / Training	<ul style="list-style-type: none"> Excellent 	<ul style="list-style-type: none"> Subdivide and should consider that courses can have different elements

Table 2. Compilation and summary of qualitative review of 10 reviewers.
